## YOUR BENEFITS

- Minimisation of processing costs
- Faster processes
- Automatic document completion and recording in the background
- Complete integration in SAP and multiple times SAP certified

### Processing sales orders efficiently

maxflow® interface sales orders is an extension (add-on) of the standardised import interface maxflow® interface, by means of which **customer orders** can be processed in addition to incoming invoices. **The full scope of features of maxflow® interface is available with this add-on.**

Imported data of optional XML formats can be processed with our solution. Normally, the data is recognised either via OCR and transferred to our SAP interface or the data is electronically transmitted directly via email. The corresponding document is created automatically in the SAP system by maxflow® interface sales orders. After the import, the image data is stored automatically and linked in the archive system via the SAP standard interface (ArchiveLink).

### Data verification

maxflow® interface sales orders records the respective document for customer orders at the head and position level. The imported sales order data is verified, completed and corrected in an automated process based on a flexible and customisable set of rules of special heuristics modules.

## Manual correction of data

If the imported sales order data remains inconsistent in spite of the automated correction feature, the corresponding information can be added or corrected manually in the maxflow® interface sales order Verify GUI. In addition, the integration in SAP assures the direct availability of the SAP master data within the Verify GUI without requiring a separate data export. The scanned-in original is also always directly accessible.

## OVERVIEW OF ADDITIONAL FEATURES

- Product-internal display and processing interface for individual records (Verify GUI)
- Summary of all processed documents on the maxflow® interface monitor
- Comprehensive analysis possibilities
- Flexible and freely configurable maxflow® interface process
